# The Time Heist LDD

## Overview

*Time Heist* is a stealth experience that uses standard movement controls (WASD for movement and Shift to sprint) alongside additional mechanics: teleportation and the time pistol. The critical path allows the player to teleport themselves above enemies onto pillars and rocks in the environment.

### Mechanics:

**Teleportation**: The player teleports to nearby ledges with the cursor. This ability has a cooldown.

**Time Pistol**: The time pistol temporarily freezes NPC enemies, immobilizing them and preventing detection. It fires a laser projectile and has a cooldown.

**Sprint:** The sprint will have a stamina bar that will deplete over time and when not moving will recharge.

### Environment

The level takes place in a cavern with three distinct height levels:

**Sea Level (Starting Area)**: The player begins on this level, where initial navigation and enemy encounters occur.

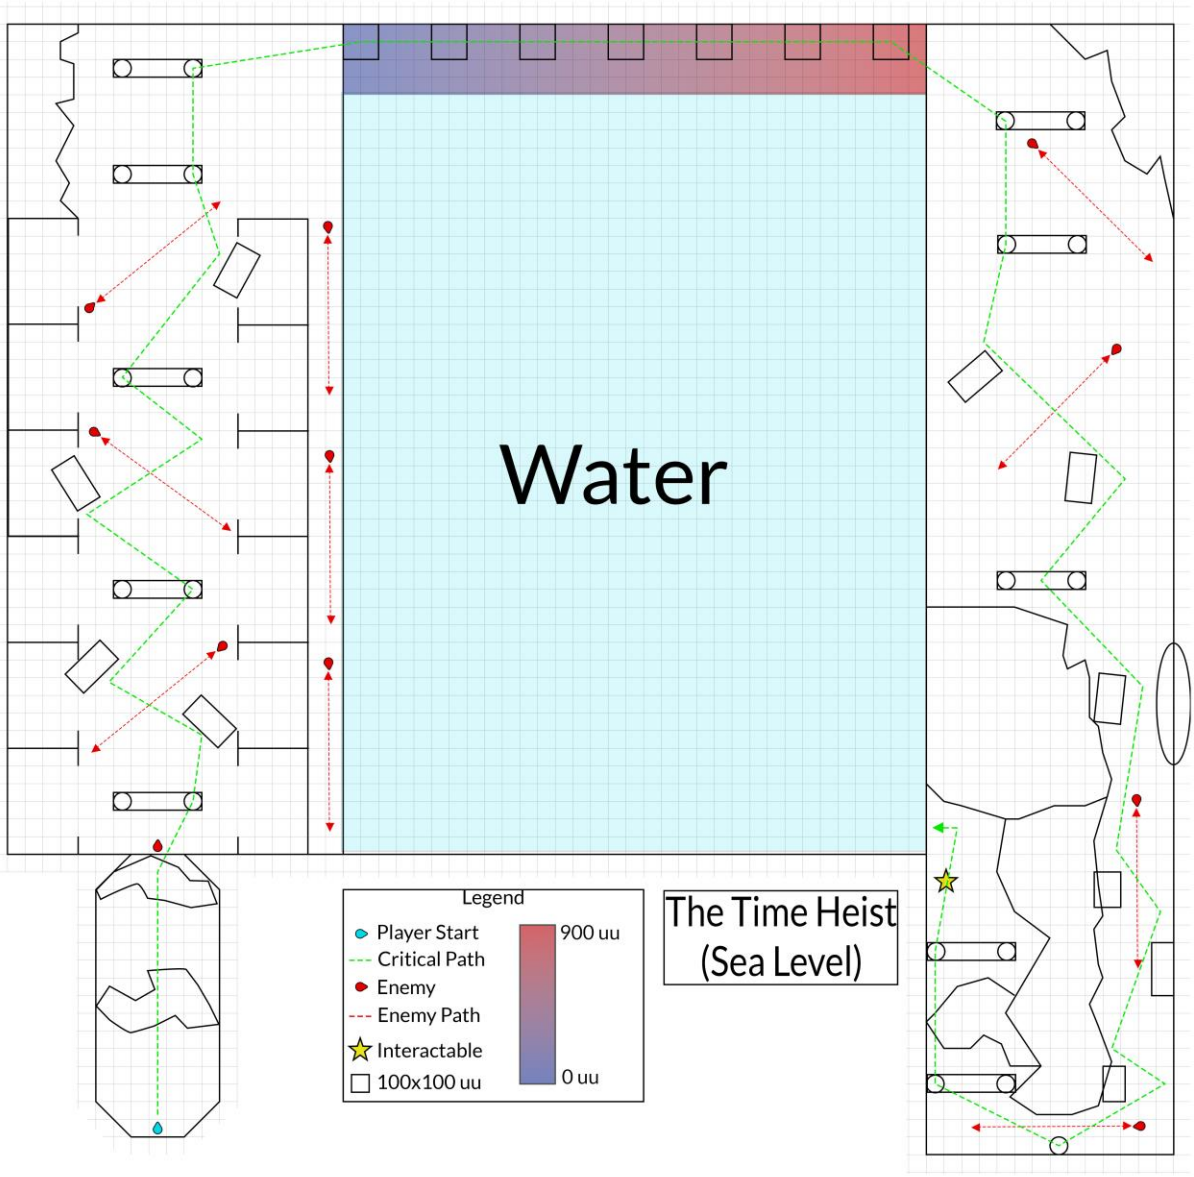

**Upper Level**: Accessible by teleporting to rock ledges on the cave wall.

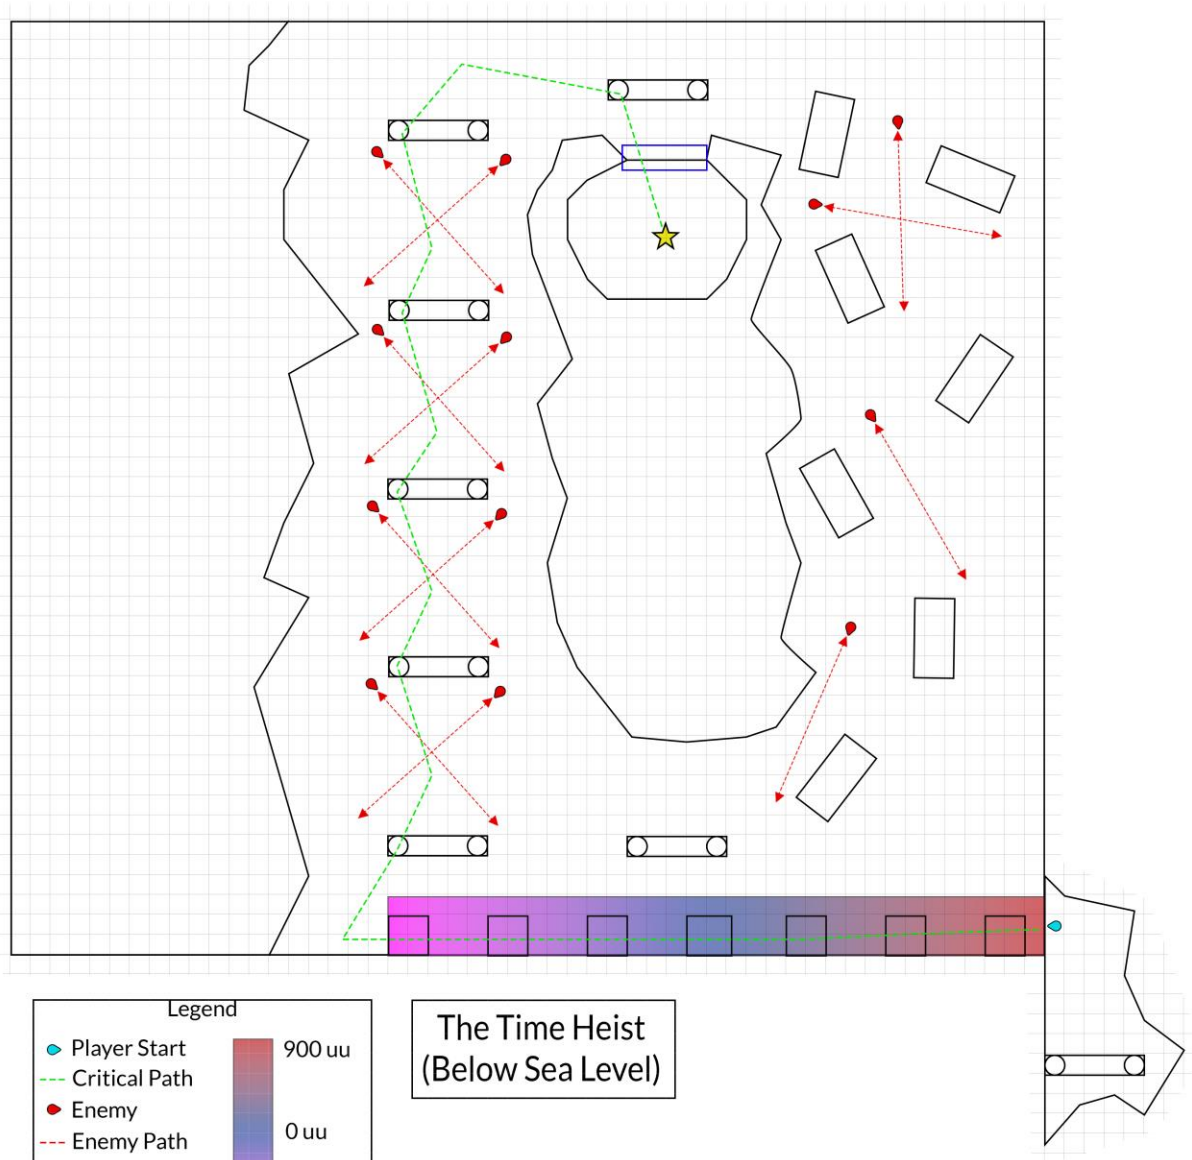

**Below Sea Level**: After lowering the water, the player accesses this area to retrieve the artifact. More enemy encounters occur.

## Narrative

The AI companion briefs the player, explaining that this is their first solo mission to recover a relic for black-market sale. The AI warns of rival time bandits and directs the player to a checkpoint where they must wait for the tide to lower, revealing the full level. As night falls, lighting shifts from warm to cool tones, and the soundscape transitions to reflect nighttime, enhancing the stealth atmosphere.
